

**Log Line:** What could a fallen tree branch mean to a child? It could be a powerful sword ready to conquer any battle, or a lovely flute waiting to sing a happy tune. For a child, the possibilities are endless. For a child, the imagination can do wonders.

**Khloe's Klubhouse, a television show targeted for kids ages 3-7, focuses on getting children to use their imaginations through the art of live storytelling in a theatrical setting.** My primary goal is to get kids proactive with their imaginations and bodies by finding ordinary objects and transforming them into an adventurous tale. *Khloe's Klubhouse* also hopes to teach children the value of live theater by recreating the traditional "story time" through performance rather than by simply reading or listening. *Khloe's Klubhouse* is designed to allow children to feel that what they see on the screen can be easily done in their own homes-they too can take a fallen branch and, with the help of their imaginations, turn it into something magical.

**The Story:** *Khloe's Klubhouse* opens with Khloe and her two friends, Molly and Benji, who discover a magical book of stories belonging to Ms. Stella the Storyteller inside their clubhouse. After dropping the precious book and causing all the pieces of each story to fall out and jumble up, the kids use a theatrical stage to act out new adventures to fill the book's blank pages. In each episode, Khloe and her friends pull out three random objects from color-coded bins and, by using their imaginations and a suggestion of location from Ms. Stella, use those items to guide them in creating and performing a story on this magical stage. Ms. Stella will interrupt the performance periodically to check in with the audience asking if the viewers can detect the prop being used in the story. Each tale is full of fun and surprises, but also leaves everyone with meaningful lessons relating to social interaction, moralistic values, and relationship building tools.

The show will also encourage its viewers to use their imaginations and send in their own ideas of how they would transform a common object. These answers will be featured in each episode through animation. We hope to inspire children to take an interest in expressing themselves and performing.
